# Foodie 🍴

## 1. Introduction

The Online Food Ordering Website is a web-based application designed to make ordering food easy and convenient for customers. It allows users to explore different food categories, view food items with images and prices, search for their favourite dishes, and add items to a shopping cart.

The website is developed using **HTML, CSS, and JavaScript**. HTML is used to create the structure of the website, CSS is used to design and style the pages, and JavaScript is used to add interactive features such as food searching, category filtering, and cart management.

The website provides information about the restaurant, special offers, food ratings, and customer reviews. It also includes a responsive design that allows users to access the website on computers, tablets, and mobile phones.

This project demonstrates how web development technologies can be used to create an attractive and user-friendly food ordering interface.

## 2. Features

### 2.1 Home Page

The home page welcomes users with an attractive design, a food banner, and a search bar. It helps users quickly understand the purpose of the website.

### 2.2 Food Categories

The website provides different food categories, including:

- Pizza
- Burgers
- Biryani
- Pasta
- Desserts
- Drinks

Users can select a category to view the related food items.

### 2.3 Food Menu

The menu displays different food items with images, descriptions, prices, and ratings. This helps users explore the available dishes and choose their favourites.

### 2.4 Search Functionality

The search feature allows users to search for food items by entering a food name or category. It filters the menu and displays matching results.

### 2.5 Add-to-Cart Functionality

Users can add food items to their cart by clicking the Add button. The cart displays the number of items selected and calculates their total price.

### 2.6 Special Offers

The website displays promotional offers, such as discounts on first orders and free delivery on orders above a specified amount.

### 2.7 Restaurant Information

The website provides restaurant details, including its name, ratings, estimated delivery time, delivery fee, and opening hours.

### 2.8 Customer Reviews

A customer review section displays sample ratings and feedback. It helps demonstrate how customer opinions can be presented on a food ordering website.

### 2.9 Responsive Design

The website uses CSS media queries to adjust its layout for different screen sizes. This makes it easier to view and use on desktops, tablets, and mobile phones.

### 2.10 Interactive User Interface

JavaScript provides interactive functionality, including searching for food, filtering categories, adding items to the cart, and displaying notifications.

**Note:** The project is a front-end demonstration. It does not currently support real orders, online payments, user accounts, or live delivery tracking.

## 3. Applications

The Online Food Ordering Website can be used in several areas.

### 3.1 Restaurants

Restaurants can use similar websites to display their menus, food prices, special offers, and customer reviews.

### 3.2 Cafes and Fast-Food Shops

Cafes, bakeries, and fast-food shops can use this type of website to showcase their products and provide customers with an easy way to explore their menus.

### 3.3 Online Food Delivery Services

Food delivery businesses can develop similar interfaces to help customers browse food items and manage their selections before placing an order.

### 3.4 Small Food Businesses

Small businesses and home-based food sellers can use similar websites to promote their products and provide information about available dishes.

### 3.5 College Projects

This project is useful for students learning web development. It demonstrates the practical use of HTML, CSS, and JavaScript in building an interactive website.

### 3.6 Web Development Practice

Developers can use this project to practise webpage design, responsive layouts, DOM manipulation, event handling, search functionality, and basic shopping cart logic.

### 3.7 Food Menu Display

The website can be adapted to display food menus, prices, product images, ratings, and promotional offers in an organised format.
